

CARDLOCK VENDING

Since January 1995

June 23, 2008

**Memo to: CVI staff
CVI representatives**

Subject: CardMaster power requirements when interfacing with solar panel units

Solar panels are sized and priced based on how much power they must supply.

The solar panels will be 12 vdc or 24 vdc. The power consumption at 12 vdc is 80ma when the unit is idle (at rest), and at full load with both dispensers activated 800ma.
